Infrared Camera System

IRIS - Infrared Imaging System

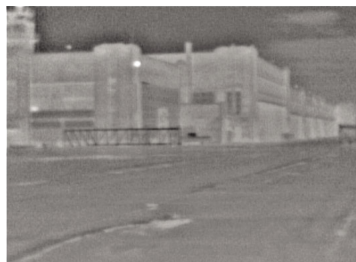

With IRIS from L-3 Avionics Systems, Scandinavian Avionics provides enhanced vision for your aircraft or helicopter in any environment - day or night.

Improve overall flight safety

Scandinavian Avionics and L-3 offer an affordable infrared camera system to enhance safety in a range of aircraft and helicopters, including the King Air and Twin Commander series aircraft and Bell 206 helicopter.

The L-3 IRIS provides enhanced visibility of almost any object, in the air or on the ground, day or night. The IRIS technology is a tremendous aid to terrain mapping, collision avoidance, ground maneuvers, weather mapping and situational awareness. It supports pilots during take-off and landing by helping them spot animals, ground crew and other taxiing aircraft.

A clear view - in any environment

- Total darkness
- Smog, day or night
- Smoke
- Blowing dust
- Blinding sunlight
- Ground operations
- Haze
- Take offs
- En route
- Approaches
- Landings
- Light fog

As the human eye detects variations in color, the IRIS camera detects variations in heat. Originally developed for the military, this revolutionary flying system is now affordable for a wide range of civil aircraft.

IRIS' advanced technology measures heat signatures and creates an electronic image of everything in view. A real-time black and white image of people, animals and terrain is displayed on any compatible RS-170 cockpit display.

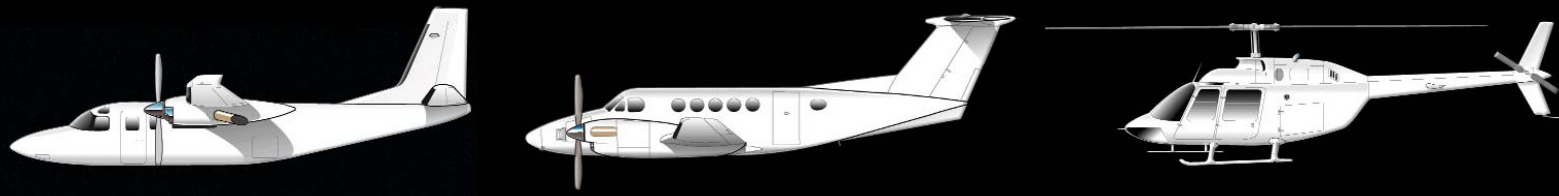

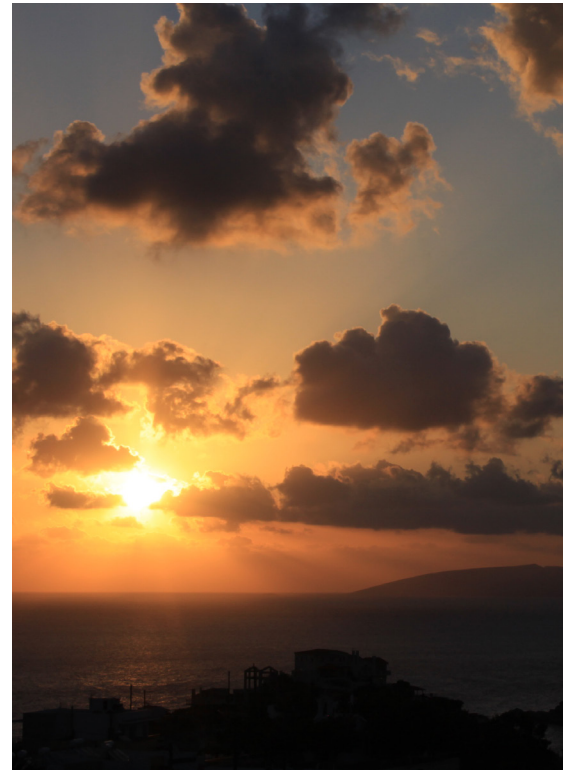

Because the system detects heat and not light, bright oncoming light, solar glare or the darkness of the night is not a problem for pilots flying IRIS equipped aircraft. Whether objects are hot or cold, IRIS's instantaneous automatic gain and level control keeps the image optimized and critical features remain easy to see.

Special Price Campaign

L-3 Avionics has made this high-end technology incredibly affordable and now you have the opportunity to upgrade your aircraft at an even lower price.

Scandinavian Avionics is pleased to offer the IRIS camera system from L-3 for the King Air and Twin Commander series aircraft as well as the Bell 206 series helicopters at reduced prices until the 31st of March 2011. Other aircraft types upon request.

Upgrade your aircraft today and enjoy the safety and confidence that comes with flying an IRIS equipped aircraft.

Scandinavian Avionics A/S (SA) is a highly experienced avionics company characterised by high quality products, services, worldwide support and a responsive, open-minded and professional attitude in all aspects of the business.

From the corporate headquarter in Billund, Denmark and divisions in Sweden, Norway, Czech Republic, Greece, Malaysia, Bahrain and India, SA provides avionics installation, certification, maintenance, support and training with the main business platforms being larger helicopters, corporate aircraft, regional airlines and defence electronics.

The customer base is geographically spread over all of Europe, Africa, CIS, the Middle and Far East, and as far as possible all customers are able to enjoy SA's worldwide technical services on-site at the customer's location, available around the clock.
