Mechanical Certification Engineer - Scandinavian Avionics Design (SAD)

At Scandinavian Avionics Design (SAD) we are looking to expand our design team at our headquarters in Billund, Denmark with a mechanical engineer for structural design and calculation.

You will be part of our design team and will be designing doublers for antenna installations on pressurized aircraft, reinforcements for feed thru in pressurized bulkhead, shelf and brackets and also you will be performing structural load analysis for the design (this is just some examples) all to meet EASA requirements and safety regulations. The job will include certification/recertification tasks on existing designs and installations (on aircraft imported to Europe) that for various reasons are not accepted by EASA.

Another very important part of the job will be writing compliance documents for documentation of design projects. In that connection, it is important that you enjoy reading and interpreting rules and regulations, as all work and documentation we do is controlled by authorities.

We imagine that you have a Bachelor of Science degree with a mechanical background and have experience and understanding of mechanical design.

All documentation is prepared in English and several members of the design team are remotely located in other countries. Therefore, our corporate language is English and needless to say, your English skills must be excellent – both verbally and written.

Further information can be obtained by contacting our HOD, Erling Leif Linneberg on ell@scanav.com.

Applications will be evaluated on an ongoing basis, so please send your application and CV to CFO, Kjeld C. Fuglholt on kcf@scanav.com as soon as possible.

About Scandinavian Avionics Design

Scandinavian Avionics Design (SAD) is an EASA approved design organization and was approved in the year 2004 at the very start of EASA's establishment.

SAD has been producing STC's and minor changes to a large variety of aircraft and rotorcraft during the last 6 years. Most of our work is for European customers but lately also the Middle and Far East have become steady market places for our design work.

The authorized Scope of work for our design organization includes: "Avionics with the necessary electronic and mechanical installation", "Structure" and "Cabin Interiors". This work is on large and small aero planes and rotorcraft.

SAD is part of the SA Group, which is an umbrella organization consisting of a number of SA divisions and joint ventures around the world.

About Scandinavian Avionics A/S (The SA Group)

Scandinavian Avionics A/S (The SA Group) is a highly experienced Part 21 and Part 145 approved avionics organization characterized by high quality products, services, worldwide support and a responsive, open-minded and professional attitude in all aspects of the business.

From the corporate headquarters in Billund, Denmark and divisions in Sweden, Norway, Czech Republic, Greece, Malaysia, Bahrain and India, the SA Group provides avionics sales, installation, certification, maintenance, support and training with the main business platforms being larger helicopters, corporate aircraft, regional airlines and defense electronics.

The customer base is geographically spread over all of Europe, Africa, CIS, the Middle & Far East and India.
